

## POSITION, VELOCITY, AND ACCELERATION - ANSWERS

Find the position and velocity functions having the given acceleration and initial position and velocity at time  $t = 0$  seconds. Then find the speed at time  $t = 5$  seconds. Assume that the units associated with distance are *feet*.

1.  $\vec{a}(t) = -32\hat{k}$ ,  $\vec{v}(0) = \vec{0}$ ,  $\vec{r}(0) = 100\hat{k}$

$$\vec{v}(t) = \int \vec{a}(t) dt = \left( \int -32 dt \right) \hat{k} = (-32t)\hat{k} + \vec{C}$$

$$\vec{v}(0) = \vec{0} + \vec{C} = \vec{0} \Rightarrow \vec{C} = \vec{0}$$

$$\vec{v}(t) = (-32t)\hat{k}$$

$$\vec{r}(t) = \int \vec{v}(t) dt = \left( \int -32t dt \right) \hat{k} = (-16t^2)\hat{k} + \vec{C}$$

$$\vec{r}(0) = \vec{0} + \vec{C} = 100\hat{k} \Rightarrow \vec{C} = 100\hat{k}$$

$$\vec{r}(t) = (-16t^2)\hat{k} + 100\hat{k} = (-16t^2 + 100)\hat{k}$$

$$\text{speed} = \|\vec{v}(5)\| = \|-160\hat{k}\| = 160 \frac{\text{feet}}{\text{second}}$$

2.  $\vec{a}(t) = -32\hat{k}$ ,  $\vec{v}(0) = -3\hat{k}$ ,  $\vec{r}(0) = 100\hat{k}$

$$\vec{v}(t) = \int \vec{a}(t) dt = \left( \int -32 dt \right) \hat{k} = (-32t)\hat{k} + \vec{C}$$

$$\vec{v}(0) = \vec{0} + \vec{C} = -3\hat{k} \Rightarrow \vec{C} = -3\hat{k}$$

$$\vec{v}(t) = (-32t)\hat{k} - 3\hat{k} = (-32t - 3)\hat{k}$$

$$\vec{r}(t) = \int \vec{v}(t) dt = \left( \int -32t dt \right) \hat{k} = (-16t^2 - 3t)\hat{k} + \vec{C}$$

$$\vec{r}(0) = \vec{0} + \vec{C} = 100\hat{k} \Rightarrow \vec{C} = 100\hat{k}$$

$$\vec{r}(t) = (-16t^2 - 3t)\hat{k} + 100\hat{k} = (-16t^2 - 3t + 100)\hat{k}$$

$$\text{speed} = \|\vec{v}(5)\| = \|-160 - 3\hat{k}\| = 163 \frac{\text{feet}}{\text{second}}$$

$$3. \quad \vec{a}(t) = -32\hat{k}, \quad \vec{v}(0) = 10\hat{i} + 10\hat{j} + 10\hat{k}, \quad \vec{r}(0) = \vec{0}$$

$$\vec{v}(t) = \int \vec{a}(t) dt = \left( \int -32 dt \right) \hat{k} = (-32t)\hat{k} + \vec{C}$$

$$\vec{v}(0) = \vec{0} + \vec{C} = 10\hat{i} + 10\hat{j} + 10\hat{k} \Rightarrow \vec{C} = 10\hat{i} + 10\hat{j} + 10\hat{k}$$

$$\vec{v}(t) = (-32t)\hat{k} + 10\hat{i} + 10\hat{j} + 10\hat{k} = 10\hat{i} + 10\hat{j} + (-32t + 10)\hat{k}$$

$$\begin{aligned} \vec{r}(t) &= \int \vec{v}(t) dt = \left( \int 10 dt \right) \hat{i} + \left( \int 10 dt \right) \hat{j} + \left( \int (-32t + 10) dt \right) \hat{k} \\ &= (10t)\hat{i} + (10t)\hat{j} + (-16t^2 + 10t)\hat{k} + \vec{C} \end{aligned}$$

$$\vec{r}(0) = \vec{0} + \vec{C} = \vec{0} \Rightarrow \vec{C} = \vec{0}$$

$$\vec{r}(t) = (10t)\hat{i} + (10t)\hat{j} + (-16t^2 + 10t)\hat{k}$$

$$\text{speed} = \|\vec{v}(5)\| = \|10\hat{i} + 10\hat{j} - 150\hat{k}\| = \sqrt{22,700} = 10\sqrt{227} \frac{\text{feet}}{\text{second}} \approx 150.67 \frac{\text{feet}}{\text{second}}$$

$$4. \quad \vec{a}(t) = -\cos(t)\hat{i} - \sin(t)\hat{j}, \quad \vec{v}(0) = -\hat{i}, \quad \vec{r}(0) = \hat{j}$$

$$\vec{v}(t) = \int \vec{a}(t) dt = \left( \int -\cos(t) dt \right) \hat{i} + \left( \int -\sin(t) dt \right) \hat{j} = -\sin(t)\hat{i} + \cos(t)\hat{j} + \vec{C}$$

$$\vec{v}(0) = \hat{j} + \vec{C} = -\hat{i} \Rightarrow \vec{C} = -\hat{i} - \hat{j}$$

$$\vec{v}(t) = (-\sin(t) - 1)\hat{i} + (\cos(t) - 1)\hat{j}$$

$$\vec{r}(t) = \int \vec{v}(t) dt = \left( \int (-\sin(t) - 1) dt \right) \hat{i} + \left( \int (\cos(t) - 1) dt \right) \hat{j} = (\cos(t) - t)\hat{i} + (\sin(t) - t)\hat{j} + \vec{C}$$

$$\vec{r}(0) = \hat{i} + \vec{C} = \hat{j} \Rightarrow \vec{C} = -\hat{i} + \hat{j}$$

$$\vec{r}(t) = (\cos(t) - t)\hat{i} + (\sin(t) - t)\hat{j} - \hat{i} + \hat{j} = (\cos(t) - t - 1)\hat{i} + (\sin(t) - t + 1)\hat{j}$$

$$\begin{aligned} \text{speed} &= \|\vec{v}(5)\| = \|(-\sin(5) - 1)\hat{i} + (\cos(5) - 1)\hat{j}\| = \sqrt{(-\sin(5) - 1)^2 + (\cos(5) - 1)^2} \\ &\approx 0.7175 \frac{\text{feet}}{\text{second}} \end{aligned}$$

$$5. \quad \vec{a}(t) = -5\cos(t)\hat{i} - 5\sin(t)\hat{j}, \quad \vec{v}(0) = -5\hat{i} + 5\hat{j}, \quad \vec{r}(0) = 5\hat{i} + 5\hat{j}$$

$$\vec{v}(t) = \int \vec{a}(t) dt = \left( \int -5\cos(t) dt \right) \hat{i} + \left( \int -5\sin(t) dt \right) \hat{j} = -5\sin(t)\hat{i} + 5\cos(t)\hat{j} + \vec{C}$$

$$\vec{v}(0) = 5\hat{j} + \vec{C} = -5\hat{i} + 5\hat{j} \Rightarrow \vec{C} = -5\hat{i}$$

$$\vec{v}(t) = (-5\sin(t) - 5)\hat{i} + 5\cos(t)\hat{j}$$

$$\vec{r}(t) = \int \vec{v}(t) dt = \left( \int (-\sin(t) - 5) dt \right) \hat{i} + \left( \int 5\cos(t) dt \right) \hat{j} = (5\cos(t) - 5t)\hat{i} + 5\sin(t)\hat{j} + \vec{C}$$

$$\vec{r}(0) = 5\hat{i} + \vec{C} = 5\hat{i} + 5\hat{j} \Rightarrow \vec{C} = 5\hat{j}$$

$$\vec{r}(t) = (5\cos(t) - 5t)\hat{i} + 5\sin(t)\hat{j} + 5\hat{j} = (5\cos(t) - 5t)\hat{i} + (5\sin(t) + 5)\hat{j}$$

$$\text{speed} = \|\vec{v}(5)\| = \|(-5\sin(5) - 5)\hat{i} + 5\cos(5)\hat{j}\| = \sqrt{(-5\sin(5) - 5)^2 + 25\cos^2 5}$$

$$\approx 1.4331 \frac{\text{feet}}{\text{second}}$$
