## CIRCLES AND SLINKYS

We all know an equation for a circle of radius $r$ and center at the origin.

$$
x^{2}+y^{2}=r^{2}
$$

We also know various trigonometric relations.

$$
\begin{aligned}
& x=r \cos \theta \\
& y=r \sin \theta
\end{aligned}
$$

These trigonometric relations also define our parametric equations for the circle.

$$
\begin{aligned}
& x=r \cos t \\
& y=r \sin t \\
& 0 \leq t \leq 2 \pi
\end{aligned}
$$

And if we add a z coordinate, we get a slinky called a helix.

$$
\begin{aligned}
& x=r \cos t \\
& y=r \sin t \\
& z=\frac{t}{5} \\
& 0 \leq t \leq 30
\end{aligned}
$$

And that's how it's done!

$$
\begin{aligned}
& x=r \cos t \\
& y=r \sin t \\
& z=\frac{t}{5} \\
& 0 \leq t \leq 30
\end{aligned}
$$
